

1

Helstu einkenni skógarbotnsplantna

- Fjölærar jurtkenndar plöntur
- Mynda gjarnan breiður á skógarbotninum
 - Ofanjarðarreglur
 - Viðfórukt rótakerfi (rótarskot)
 - Laukar eða hnyði
- Blómstra snemma á vorin áður en skógurinn laufgast
- Þola talsverðan skugga
- Ekki spenntar fyrir mikilli samkeppni við gras
- Auðveldar í fjölgun

2

Staðsetning skógarbotnsplantna

- Blómstrandi skógarbotnsplöntur þurfa beina sól hiuta úr degi til að blómstra.
- Staðsetning
 - Í gisnum laufskógi
 - Í skógarjaðri
 - Í rjóðrum
 - Meðfram vegum og stígum

3

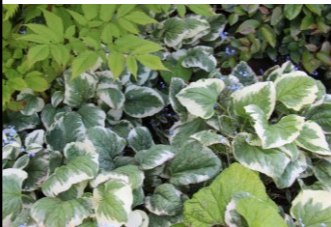

Blómstrandi skógarjaðarsplöntur

- Margar tegundir fjölærra plantna geta fallið í þennan flokk.
- Þurfa beina sól góðan hluta úr degi til að ná að blómstra.
- Njóta skjóls frá skóginum og geta því verið talsvert hávaxnar.
- Þurfa að standa sig vel í samkeppni við annan gróður.

4

Skuggþolnar plöntur

- Skógarbotnsplöntur sem ekki eru ræktaðar vegna blómanna geta staðið í meiri skugga.
- Þær eru valdar á grunnni blaðlógunar, blaðlitar og/eða vaxtarlags.
- Staðsetning
 - Í þéttari laufskógi
 - Við þrönga skógarstíga
 - Innan um og saman við runnagróður í skógi
